

Facts about aluminium...

Aluminium is the third most commonly found basic element in the world after oxygen and silicon. It is found as an oxide in the earth, the air and in water. Up to 8% of the earth's bedrock is aluminium. Aluminium is produced mostly as bauxite found in unlimited quantities in the earth's bedrock. Continual earth movements result in replenished supplies of aluminium.

Light and Durable

Aluminium has a specific weight of 2.7kg/dm³ which is only one third of the specific weight of steel. The durable lightweight nature of aluminium construction results in better transport economies. The use of aluminium in cars, ships, trains and other vehicles has increased dramatically in recent years. Aluminium is an ideal material for use in the Nordic climate as lower temperatures increase the strength of aluminium.

Resistance to Corrosion

Aluminium is extremely resistant to corrosion. Aluminium products have lower maintenance costs and longer product life cycles. Aluminium products become even more resistant to corrosion with anodising which also gives a better finish.

Environmental friendly

Aluminium is a valuable recyclable metal. $\frac{3}{4}$ of all aluminium that is recycled is returned for use there recycling of aluminium becomes a national economic resource.

Aluminium bunk guarantee maintenance free and economical timber transport

- We use only the highest quality alloys in our products
- Anodised stakes and bunk frames secure better and longlasting product
- Stake and bunkframes are secured by bolts, which prevent wearings
- We supply complete bunkfixation assortment to choose from: firm-, quick- and friction attachments
- Aluminium bunk combine economy, maintenance free, durability and security

- **ALU50**
Lightest on the market and maintenance free with one length. Available with reinforced stake.
- **ALU70**
Light and steady bunk for demanding timber transport. Available with reinforced stake.
- **ALU90**
Flagship of aluminium series. Lighter and stiffer than ever

Technical information:

	Alu 50	Alu 70	Alu 90
①	330	380	420
②	175	180	185

Secure fixing of bunk to truck or trailer with bandstrap

Quick Fixing

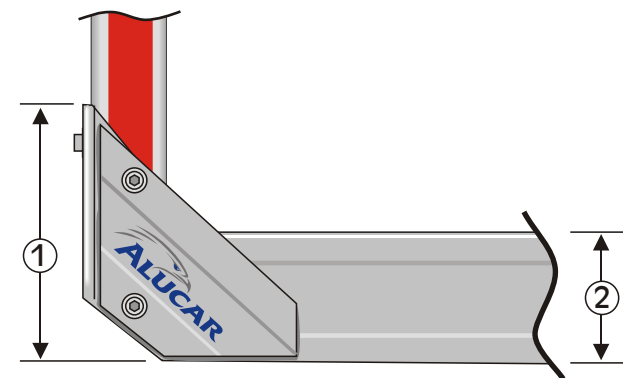

Friction Fixing

Firm Fixing

Secure bolted fitting of stakes on bunkframe

Tapered stake as standard

Extendable E stake as optional
